

Serhii Kholodnyi

Senior Frontend Engineer — Angular / TypeScript

Barcelona, Spain (CET) · Legal resident with Spanish work authorization · Remote — EU / UK / US
[+34 613 468 775](tel:+34613468775) | serg.holodny@gmail.com | linkedin.com/in/serhii-kholodnyi

SUMMARY

Senior Frontend Engineer with 8+ years in Angular/TypeScript across fintech, insurance, and SaaS, and 6 years leading teams. Kept an 800k-user production SaaS current across 12 major Angular versions (v9 → v21) and led its migration to Signals (80%+ of the app). Deep state-management and architecture expertise (NgRx incl. SignalStore, NGXS, RxJS, Nx monorepos, DDD), production Node.js/Express on financial systems, and shipped LLM-powered features (Amazon Bedrock, SSE streaming). Hands-on leader: hiring, mentoring, Scrum, CI/CD, and client-facing delivery from presales to release.

WORK EXPERIENCE

Senior Frontend Engineer / Team Lead, Nov 2021 – Present

diib.com — SEO & website-growth SaaS, 800k+ users across 160 countries · Remote (contract via TurnKey Labs)

- Led frontend delivery end-to-end as Team Lead: architecture and technology decisions, planning and task assignment across 3 engineers plus contract freelancers, and daily production ownership — morning Sentry triage, fixing or delegating issues to keep the service available.
- Owned the platform's Angular upgrade path across 12 major versions (v9 → v21, most recently v19 → v21), keeping the production app on current Angular throughout.
- Drove an iterative migration to Angular Signals — 80%+ of the application converted without pausing feature delivery.
- Built the Angular frontend for diib Assist, an AI chat assistant (Amazon Bedrock, Titan LLM): real-time response streaming over Server-Sent Events, authentication, quota and error handling; extended it with email deep-links that open the chat with a suggested question pre-submitted — personalized, 24/7 self-service SEO guidance from each customer's own site data.
- Re-architected the main dashboard from 3 blocking upstream requests (worst case ~40 s waiting on Google PageSpeed Insights) to progressive per-widget loading — first data visible immediately, with graceful degradation that reorders or hides slow widgets until their data arrives.
- Proposed and shipped an internal operations dashboard for the CEO and marketing team: real-time health of third-party data fetchers, used to start and stop ad campaigns based on system performance.
- Integrated Red Flag to track customers' visibility in AI answer engines (AEO), extending the product's SEO insights into AI search.
- Integrated 7 external data sources (Google Analytics, Google My Business, Facebook, Instagram, YouTube, Serpstat, Google PageSpeed Insights) via OAuth2 plus Google/Facebook social sign-in; owned GDPR-compliant data handling for Instagram and YouTube — platform app reviews, policy compliance, and data-deletion flows; built the frontend for a Yelp-based local-discoverability feature.
- Migrated billing to Stripe and built a constructor-style system for standardized pricing/payment pages enabling rapid A/B testing — early variants lifted sales by 5–12%.
- Rebuilt the transactional email system from scratch on a new MJML design system — email engagement roughly doubled, becoming the product's primary retention channel.
- Raised engineering standards: incrementally enabled TypeScript strict mode and expanded ESLint rules across a codebase originally ported from server-rendered PHP (Symfony), and introduced the team's AI-assisted development practices (shared context files and guidelines for AI coding tools).

Senior Frontend Engineer / Team Lead, Sep 2017 – Nov 2021

DataArt — Dnipro, Ukraine

London Stock Exchange Group (LSEG) — corporate portal — Angular, TypeScript, NgRx, Nx, RxJS, Jest, Cypress

- Designed the API and led development of a custom Angular component library adopted by 2 teams (6 developers).
- Designed and implemented the frontend architecture following DDD principles; set up Trunk-Based Development across teams in an Nx monorepo.

Legal & General — corporate portal for the UK insurer — Angular, TypeScript, NGXS, RxJS, PrimeNG, Karma/Jasmine

- Designed a modular frontend architecture, achieved 80% unit-test coverage, and met WCAG 2.1 accessibility standards.

Sharpfin — Swedish wealth-management platform — Angular

- Migrated the full application from AngularJS to modern Angular — cut bundle size and roughly doubled UI speed; moved the team to Scrum.

Trading & investment-portfolio platform for a German fintech (two partner banks) — Node.js, Express.js, PostgreSQL, React, Redux

- Built backend services letting bank clients track portfolio performance and trade securities; implemented portfolio performance calculations.
- Integrated paid market-data APIs for daily securities prices; restructured the architecture so one codebase served multiple bank configurations.
- Took the project over from another team and brought it to release in ~3 months; configured the CI pipeline for all teams and introduced Docker containerization.

Frontend Developer, Jan 2017 – Sep 2017

EOS Data Analytics — Dnipro, Ukraine

- Built cloud-based GIS analysis tools with Angular/AngularJS, TypeScript, Leaflet, and Google/OpenStreetMap (AWS, SCSS).

EARLIER EXPERIENCE

Automation QA — Ciklum (2014–2017); QA — Cupid PLC (2013–2014); QA — FabulaTech (2012–2013); Technical Support & Network Engineer (2008–2011).

- 6 years in manual and automation QA across UK healthcare, BI, and education platforms; led a team of 3 QA engineers and acted as Scrum Master on the healthcare project.
- Mentored engineers through successful trial periods; built automated regression suites and tested payment-system integrations.
- 3 years in technical support and network engineering for ISPs and a hosting provider.

SKILLS

- **Angular ecosystem:** Angular (2 → 21: Signals, standalone components), RxJS, NgRx (Store, Effects, ComponentStore, SignalStore), NGXS, Nx monorepos, Angular Material, PrimeNG
- **Languages & Web:** TypeScript, JavaScript (ES2022+), HTML5, CSS3, SASS/LESS, Tailwind CSS, Core Web Vitals, WCAG 2.1, PWA
- **Testing:** Jest, Cypress, Playwright, Testing Library, Vitest, Karma/Jasmine
- **Backend & Data:** Node.js, Express.js, REST, WebSockets, Server-Sent Events; PostgreSQL, MySQL, MongoDB, Redis
- **AI engineering:** LLM-powered features via Amazon Bedrock with SSE streaming; AI-assisted development standards; Claude Code, Cursor, GitHub Copilot
- **Cloud & Tooling:** AWS (S3, CloudFront, EC2, RDS, Bedrock), Docker, CI/CD (GitHub Actions, GitLab CI, Jenkins), Vite, Webpack, esbuild, Storybook
- **Also worked with:** React (Redux Toolkit) in production; Next.js and NestJS at working-knowledge level
- **Auth & Methodologies:** OAuth2, JWT, Auth0; Scrum, Kanban, DDD, Trunk-Based Development

EDUCATION

Master's Degree in Information & Communication Networks — Zaporizhzhia National Technical University (2006–2011)
