

Serhii Kholodnyi

Senior Frontend & Fullstack Engineer | Team Lead

Tallinn, Estonia (open to remote) | +372 51900494 | serg.holodny@gmail.com
[linkedin.com/in/serhii-kholodnyi](https://www.linkedin.com/in/serhii-kholodnyi)

SUMMARY

Senior Frontend Engineer and Team Lead with 16+ years in IT, including 8 years in frontend development and 6 years in Team Lead roles, across fintech, insurance, and SaaS. Strong in Angular/TypeScript, with hands-on Node.js/Express experience on production financial systems and growing full-stack ownership of features end-to-end. Experienced in hiring and mentoring engineers, establishing CI/CD and Agile processes, and working directly with clients from presales to release.

LEADERSHIP HIGHLIGHTS

- Led teams of up to 6 engineers at a time (more in total across QA and frontend lead roles).
- Conducted 10+ technical interviews; hired and onboarded new team members, and ran onboarding for all newcomers regardless of who hired them.
- Mentored engineers who went on to advance in their careers.
- Acted as Scrum Master — ran plannings, dailies, retrospectives, and estimates; introduced Scrum and CI/CD on multiple projects.
- Owned client-facing demos, presales, and delivery estimates.

WORK EXPERIENCE

Senior Frontend Developer / Team Lead, Nov 2021 – now

diib — SEO & website-growth SaaS (800k+ users, 160 countries) | contract via TurnKey Labs | Remote

- Built the frontend for an AI chat assistant (Amazon Bedrock, Titan LLM): full UI with animations, real-time response streaming over Server-Sent Events, authentication, and quota/error handling. The assistant used each customer's own site data to deliver personalized SEO recommendations and enable 24/7 self-service support.
- Re-architected the main dashboard to load fully asynchronously — each widget fetches and renders its data independently as scans complete — improving perceived load time and supporting user retention.
- Integrated 7 external data sources (Google Analytics, Google My Business, Facebook, Instagram, YouTube, Serpstat, Google PageSpeed Insights) via OAuth2, plus Google/Facebook social sign-in.
- Owned GDPR-compliant data handling for Instagram and YouTube integrations, including platform app-review submissions, demo approvals, policy compliance, and data-deletion flows on disconnect.
- Migrated billing to Stripe and built a modular, constructor-style system for standardized payment pages to launch A/B tests quickly.
- Rebuilt the entire transactional email system from scratch with a new design system using MJML; built "Handshake," an embeddable lead-capture modal (custom wrapper around Mautic) for customers' sites.
- Optimized web properties (Angular app, marketing site, WordPress blogs): introduced Webpack build, minification, and async/defer script loading — cutting the marketing site's script payload by roughly 60%.
- Worked as one of 3 frontend engineers; tracked production issues with Sentry.

Senior Frontend Developer / Team Lead, Sep 2017 – Nov 2021

DataArt — Dnipro, Ukraine

Corporate portal for a UK exchange — Angular, TypeScript, NgRx, NX, RxJS, Jest, Cypress

- Designed the API and led development of a custom Angular component library used by 2 teams (6 developers).
- Designed and implemented frontend architecture following DDD principles; set up Trunk-Based Development across teams in a monorepo.

Trading & investment portfolio platform for two banks — Node.js, Express.js, PostgreSQL, React, Redux

- Built backend services (Node.js/Express) for an interface that let bank clients track portfolio performance and buy/sell securities; implemented portfolio performance calculations.

- Integrated third-party paid market-data APIs that pulled daily securities prices; improved architecture so one codebase ran across multiple bank configurations.
- Took over the project from another team and brought it to release in ~3 months; configured the CI pipeline for all teams and introduced Docker containerization.

Corporate portal for a UK insurance company — Angular, TypeScript, NGXS, RxJS, PrimeNG, Karma/Jasmine

- Designed a modular frontend architecture, achieved 80% unit-test coverage (client requirement), and met WCAG 2.1 accessibility standards.

Investment portfolio management service — migrated the full app from AngularJS to modern Angular, reduced bundle size and roughly doubled UI speed, and moved the team to Scrum.

Frontend Developer, Jan 2017 – Sep 2017

EOS Data Analytics — Dnipro, Ukraine

- Built cloud-based GIS analysis tools using Angular/AngularJS, TypeScript, Leaflet, and Google/OpenStreetMap (AWS, SCSS, Grunt).

EARLIER EXPERIENCE

Automation QA — Ciklum (2014–2017); QA — Cupid PLC (2013–2014); QA — FabulaTech (2012–2013); Technical Support & Network Engineer (2008–2011).

- 6 years in manual and automation QA across UK healthcare, BI, and education platforms (Selenium, Java, Appium, Cucumber, Rest Assured); led a team of 3 QA engineers and acted as Scrum Master on the healthcare project.
- Mentored two engineers at Cupid PLC who both passed their trial periods; built automated regression suites and tested payment-system integrations.
- 3 years in technical support and network engineering for ISPs and a hosting provider.

SKILLS

- **Languages:** TypeScript, JavaScript (ES2020+), HTML5, CSS3 (Flexbox, Grid)
- **Frameworks & State:** Angular, React, Vue; Angular Signals, RxJS, NgRx, NGXS, Redux / Redux Toolkit
- **Styling:** Tailwind CSS, SASS/LESS, CSS Modules, styled-components, Material UI, PrimeNG
- **Backend (Node.js):** Node.js, Express.js, NestJS, REST, WebSockets, Server-Sent Events; Next.js and Prisma/Drizzle (working knowledge)
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **Cloud & DevOps:** AWS (S3, CloudFront, EC2, RDS, VPC, Bedrock), Docker, CI/CD (GitHub Actions, Jenkins, GitLab CI), Vercel
- **Build & Tooling:** Vite, Webpack, esbuild, Nx, npm / pnpm / yarn, ESLint, Prettier, Husky, Storybook
- **Testing:** Jest, Vitest, Cypress, Playwright, Testing Library, Karma/Jasmine
- **Web Platform:** Core Web Vitals, Lighthouse, PWA, Web Accessibility (WCAG 2.1), Web Components
- **AI Integration:** LLM-powered features via Amazon Bedrock with SSE streaming; AI dev tools — Claude Code, Codex, Cursor, Windsurf, GitHub Copilot
- **Auth & Methodologies:** OAuth2, JWT, Auth0; Scrum, Kanban, DDD, Trunk-Based Development

EDUCATION

Master's Degree in Information & Communication Networks — Zaporizhzhia National Technical University, Radio Engineering Department (2006–2011).

CERTIFICATIONS

ISTQB Certified Tester (Foundation Level) · Angular NgRx Store Masterclass · Vue.js (certified).

LANGUAGES

English (professional working), Ukrainian (native), Russian (native), Spanish (limited working).
